- [Introduction](#)
- [Physical Topology metrics](#)
- [Logical Topology metrics](#)
- [Traffic \(demands and routing\) metrics](#)

Introduction

This report extracts information from the network topology: links and nodes in the network, and adds some metrics related to offered traffic.

Physical Topology metrics

This section includes some metrics calculated from the physical topology.

Metric	Value
Number of nodes	6
Number of unidirectional links	16
Average node degree	2.667
Average link distance	200.0
Average shortest path number of hops	1.533
Average second shortest path number of hops	0.0
